

WENDELL B. CASUL

Software Engineer · Web Developer · Full-Stack Developer

 Cebu City, PH

 +63 966 771 6434

 casulwendell12@gmail.com

 Open to onsite / international

PROFESSIONAL PROFILE

Software Engineer with 5 years of experience building front-end and backend systems, REST APIs, integrations, and scalable web applications. Experienced with Docker, AWS, and enterprise software development across HR, Finance, and ERP platforms.

CORE COMPETENCIES

AI Workflow Automation

LLM integration · Custom
GPT/Projects · Prompt engineering
(SDD)

API & Systems Integration

RESTful APIs · WebSockets ·
Third-party integrations · End-to-end
data flow

Full-Stack Development

React · TypeScript · PHP
(Laravel/CakePHP) · Node.js · AWS

AI Tooling

Claude · ChatGPT · Cursor IDE ·
Speckit (SDD) · Grok

PROFESSIONAL EXPERIENCE

AI Engineer / Software Developer

Forty Degree Celsius Inc.

Jul 2023 – Present

- Built onboarding and engagement features (LuLu Live) with AI-assisted functionality using LLM integration to enhance user interaction and workflow experience.
- Designed and integrated backend APIs using CakePHP, Laravel and Slim to enable secure and reliable data exchange between the systems.
- Delivered containerized applications using Docker and AWS, supporting consistent deployments and improved development workflow stability.
- Collaborated with product and QA teams in agile environments to refine requirements, address workflow issues, and deliver incremental improvements across sprints.
- Contributed to deployment workflows, environment configuration, and server-related tasks using SSH, Docker, and AWS across development and production environments.

IT Staff / Web Developer

Maple Muramoto PH Inc.

Jun 2021 – Jul 2023

- Maintained and upgraded a legacy ERP platform from PHP 5 to PHP 8+, improving system stability, maintainability, and support for business operations across Sales, Purchasing, Manufacturing, and Finance modules.
- Implemented an e-signature workflow that reduced manual paperwork and improved document processing between production sites.
- Developed an internal IT support approval system to streamline request routing and improve issue tracking and resolution workflows across multiple departments.
- Built internal dashboards and business tools using Laravel and Kendo UI to support operational reporting and data visibility for Finance and Operations teams.

- Developed Visual Basic utilities for machine tooling workflows, supporting process efficiency and operational requirements within the production environment.
- Supported maintenance and deployment of internally hosted business applications and localized production systems through SSH-based server management and environment configuration.

DEVELOPMENT METHODOLOGY

Spec-Driven Development (SDD) with SpecKit + Cursor: AI-assisted development workflows · Structured requirement analysis and implementation planning

Agile Development & Sprint Collaboration: Iterative feature delivery · Cross-functional collaboration with QA and product teams · Continuous improvement workflows

DevOps & Deployment Workflows: Docker-based containerization · SSH-based server management · AWS deployment support and environment configuration

Software Architecture & Maintainability: Clean code practices · Modular application structure · Legacy system modernization and long-term maintainability

EDUCATION

Bachelor of Science in Information Technology
University of Cebu Lapu-Lapu & Mandaue

Graduated
